

MICRODOSE THERAPY: Homeopathic Healing

Microdose therapy is an innovative treatment method that stimulates natural healing and detoxification without side effects commonly seen with drugs. Microdose therapy uses ultra-small doses of healing remedies to encourage all three stages of healing: detoxification, fortification (strengthening), and restoration. Microdose therapy uses subcutaneous and intramuscular injections to deliver treatments to the area of the body that needs them most. Most treatments take less than 5 minutes, and many times will permanently relieve the symptoms.

Microdose Therapy

- Ultra-small doses
- Stimulates natural healing
- Treats Problems
- Detoxifies and heals
- No common side effects
- 1-6 weeks for common ailments

Drug Therapy

- Large doses
- Suppresses natural healing
- Treats Symptoms
- Over-loads detox pathways
- Common side effects
- 1-6 months for common ailments
